                                                                                                                                                                                                                                                                                                                                                                                                             activity for B-cell antibody producing response e.g. 1962a antibody cresponse, in a mammal having an immunodeficiency disease, inflammatory condition or an autoimmune disease, by culturing B7-H1 with the control part of the T-cells in vitro, or administering B7-H1 or a nucleic acid encoding B7-H1 to the T-cells, such that the level of CD40 ligand on the T-cell surface is increased. The method further involves providing a recombinant cell e.g. an antigen presenting cell (APC) which is the progeny of a cell obtained from the mammal and has been transfected or transformed ex vivo with a nucleic acid encoding B7-H1, so that the cell expresses B7-H1, and administering the cell to the mammal. Prior to administration, the APC is pulsed with an antigen or an antigenic peptide. B7-H1 can be used to control pathologic cell mediated conditions (e.g. those induced by infectious agents such as Mycobacterium tuberculosis) or other pathologic cell mediated responses such as those involved in autoimmune diseases (e.g. rheumatoid arthritis).
                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence representing novel human immunoregulatory protein B7-H1 (hB7-H1) is capable of co-stimulating T-cells. The sequence for mouse B7-H1 (mB7-H1) is also given (AAU03560). B7-H1 is useful for co-stimulating T-cells such as helper T-cells that provide helper
                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                CC AADD5053-AADD5106 represent cDNAs corresponding to 15 human secreted CC ArE01218-AAED1226 represent human secreted proteins they encode. CC AAED1218-AAED1226 represent human secreted protein Irôgments or variants. The secreted protein and their genes are useful for preventing. CC treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of CC mutations in the new genes. Specific uses are described for each of the CC 15 genes, based on the tissues in which they are most highly expressed, CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, ATDS, autoimmune diseases (e.g., rheumatoid arthritis), inilammation, CC allergies, neurological disorders (e.g., Alzheiner's disease, cognitive disorders, schizophrenia, asthma, CC cardiovascular disorders, anglogenic disorders, kidney disorders, cardiovascular disorders, anglogenic disorders, kidney disorders, cardiovascular disorders, anglogenic disorders, kidney disorders,

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, a in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human B7-H6 secreted protein of the invention.

```

transmembrane protein. The nucleic acid and polypeptide a quences are useful for the diagnosis, prognosis and treatment of immunological disorders (e.g. arthritis, graft rejection and acquired immunodeficiency syndrome), inflammatory disorders (e.g. psoriasis and asthma), renal disorders, embryonic disorders, brain-related disorders (e.g. cerebral disorders, embryonic disorders, brain-related disorders (e.g. cerebral oedema), cerebrovascular diseases (e.g. ischaemia), tumours, prostate-related disorders, pituitary-related disorders (e.g. Cushing's disease and neurodegenerative diseases (e.g. Parkinson's disease). The sequence represents the amino acid sequence of human TANGO disease)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  response useful in organ transplants, graft-vers.s-host disease (GVHD), treating allergies and viral infections e.g., acquired immune deficiency syndrome (ALDS). The invention also provides B7-4 or PD-1 fusion proteins which are useful for treating immunological disorders, such as autoimmune diseases e.g., heart disease, myocardial infarction and atherosclerosis or in the case of inhibiting rejection of transplants. These fusion proteins are also used as immunogens to produce inti-R7-4 antibodies. PD-1 is useful in promoting the maintenance of pregnancy. B7-4 protein is highly expressed in placental trophoblasts and plays a role in preventing maternal rejection of the foetus. B7-4 cDNA is also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for modulating immune response by contacting an immune cell with an agent that modulates signalling via B7-4 or its receptor PD-1. Modulating the interaction between PD-1 and B7-4 modulates a costimulatory or an inhibitory signal in an immune cell, resulting in the modulation of the immune response. The invention is useful for upregulating an immune response to treat timours, neurological diseases and immunosuppressive diseases or to downregulate an immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is human B7-4 membrane (B7-4M) protein having a transmembrane and short cytoplasmic domain. The human B7-4 cDNA is isolated from human activated keratinocyte and placental cDNA libraries. B7-4 gene is localised on human chromosome 9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating e.g. cancer or allergies comprises contacting an immune cell with an agent that modulates signaling via PD-1 or B7-4 to modulate the immune response -

CC membrane (B7-4M) protein and their corresponding cDNA molecules. Human CB7-4 proteins are useful for upregulating immune response to treat viral Skin diseases such as Herpes disease or shingles disease, systemic viral CC diseases such as influenza, common cold and encephalitis, and for CC inducing tumour immunity or to downregulate an immune response useful in CC organ transplants, graft-versus-host disease (GVHD), treating allergies CC and viral infections e.g., acquired immune deficiency syndrome (AIDS). CC entacting an activated T cell with a B7-4 antigen. The invention is also used for producing non-human transgenic animals. It also provides B7-4 fusion proteins which are useful for treating immunological disorders, CC such as autoimmune diseases or in the case of transplantation. B7-4 fusion proteins are useful for gene mapping. Methods are provided CC enhancing the immune response of individuals, by inhibiting or contacting the lymphokine synthesis by the activated T cells. Diagnostic,

Diagnostic, ods are also

The sequence represents the amino acid sequence of human TANGO 509, variant #1 transmembrane protein. The nucleic acid and polypeptide sequences are useful for the diagnosis, prognosis and treatment of immunological disorders (e.g. arthritis, graft rejecti acquired immunodeficiency syndrome), inflammatory disorders (e.g. psoriasis and asthma), renal disorders, embryonic disorders, brain-

diseases

(e.g.

rejection

Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the camount of the new genes. Specific uses are described for each of the cc amount of the new genes. Specific uses are described for each of the cc 15 genes, based on the tissues in which they are most highly expressed, cc 15 genes, based on the tissues in which they are most highly expressed, cc 15 genes, based on the tissues in which they are most highly expressed, cc 16 genes, based on the tissues in which they are most highly expressed, cc 17 genes, based on the tissues in which they are most highly expressed, cc 18 genes, based on the tissues of the immune system, cc 20 canding the diseases (e.g., rheumatiod arthritis), inflammation, cc allergies, neurological disorders (e.g., Alzheimer's disease, cc altergies, neurological disorders, e.g., Alzheimer's disease, cc antibovascular disorders, angiogenic disorders, kidney disorders, cardiovascular disorders, angiogenic disorders, kidney disorders, cc astrointestinal disorders, pregnancy related disorders, and occine disorders, and infections. The proteins can also be used to aid wound the protein can be used to maintain organs before transplantation, it improved the cc cognate liquals or binding partners, and in chemotaxis, and can be used in alteriating symptoms associated with the disorders mentioned above, and condition of immunoassave or arithrian mentioned above, and radioimmunoassave mentioned above, and

                                                                                                                                                                                                                                                treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked in diagnostic immunoassays e.g., radioimmunoassay or enzyme 1 inked in diagnostic immunoassays e.g., radioimmunoassay or enzyme 1 inked in diagnostic immunoassays e.g., radioimmunoassay or enzyme 1 inked in diagnostic immunoassays e.g., radioimmunoassay or enzyme 1 inked in the present sequence represents a human secreted protein fragment which is the extracellular domain of B7-H6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; B7-4 secreted protein; B7-4S; receptor PD-1; chromosome 9; tumour; antiviral; antiallergic; gene mapping; cytostatic; myocardial infarction; atherosclerosis; neurological disease; immunomodulatory; allergy; GVHD; graft-versus-host disease; immunosuppressive disease; organ transplant; acquired immune deficiency syndrome; AIDS; autoimmune disease; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ches

                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for modulating immune response by contacting an immune cell with an agent that modulates signalling via B7-4 or its receptor PD-1. Modulating the interaction between PD-1 and B7-4 modulates a costimulatory or an inhibitory signal in an immune cell, resulting in the modulation of the immune response. The invention is useful for upregulating an immune response to treat tumours, neurological diseases and immunosuppressive diseases or to downregulate an immune response useful in organ transplants, graft-versus-bost disease (GYBD), treating allergies and viral infections e.g., acquired immune deficiency syndrome (AIDS). The invention also provides B7-4 or PD-1 fusion proteins which are useful for treating immunological disorders, such as autoimmune diseases e.g., heart disease, myocardial infarction and atherosclerosis or in the case of inhibiting rejection of transplants. These fusion proteins are also used as immunocans to produce and the continuous continuous and anthodise.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is human B7-4 secreted (B7-4S) protein having a short hydrophilic tail without a membrane anchor or a transmembrane domain. The human B7-4 cDNA is isolated from human activated keratinocyte and placental cDNA libraries. B7-4 gene is localised on human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (DAND )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PD-1 is useful in promoting the maintenance of pregnancy. B7-4 protein is highly expressed in placental trophoblasts and plays a role in preventing maternal rejection of the foetus. B7-4 cDNA is also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; Fig 3; 168pp; English.

The invention relates to human B7-4 secreted (B7-4S) protein, B7-4 CC The invention relates to human B7-4 secreted (B7-4S) protein, B7-4 CC membrane (B7-4M) protein and their corresponding cDNA molecules. Human CC B7-4 proteins are useful for upregulating immune response to treat viral CC skin diseases such as herpes disease or shingles disease, systemic viral CC inducing tumour immunity or to downregulate an immune response useful in CC organ transplants, graft-versus-host disease (GVHD), treating allergies CC and viral infections e.g., acquired immune deficiency syndrome (AIDS) CC B7-4 antagonists are used to modulate the T cell co-stimulation by CC used for producing non-human transgenic animals. It also provides B7-4 (Such as autoimmune diseases or in the case of transplantation. B7-4 CC such as autoimmune diseases or in the case of transplantation. B7-4 CC fusion proteins are used as immunogens to produce anti-B7-4 antibodies. CC B7-4 cDNA is also useful for green mapping. Methods are provided for modulating the immune response of individuals, by inhibiting or enhancing the lymphokine synthesis by the activated T cells. Diagnostic, prognostic, pharmacogenetics, screening and therapeutic methods are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human B7-4 polypeptides useful for enhancing the immune response against a viral infection or induce a tumor immunity and to diagnose conditions related to aberrant B7-4 expression or activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; B7-4 secreted protein; B7-4S; chromosome 9; antiviral; influenza; immunomodulatory; acquired immune deficiency syndrome; AIDS; anti-tumour; graft-versus-host disease; GVHD; immunological disorder; Herpes disease; autoimmune disease; common cold; shingles disease; encephalitis; therapy;
                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is human B7-4 secreted (B7-4S) protein having a short hydrophilic tail without a membrane anchor or a transmembrane homain. Human B7-4 protein is isolated from human activated keratinocyte and placental cDNA libraries. B7-4 gene is localised on human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-202936/20

The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human B7-H6 secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      mutations

Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiopenic disorders, kidney disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to ald wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in disorder in impunoassay or enzyme linked.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 skin disorder; psoriasis; sepsis; dlabetes; atherosclerost, cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; gene therapy; endocrine disorder; infection; wound healing; vulnerary; gene therapy; cell culture; chemotaxis; food additive; chromosome 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoletic disorders, diseases of the immune sy AIDS, autoimmune diseases (e.g., rheumatoid arthritis) inflammatiallergies, neurological disorders (e.g., Alzheimer's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           mutations

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TELEPHONE: (617) 227-7400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IDENTIFICATION METHOD: FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MOLECULE TYPE: protein

DESCRIPTION: B cell activation antigen; natural ligand

DESCRIPTION: for CD28 T cell surface antigen; transmembrane protein
                                                  FEATURE:
                                                                                                                                                                                                        FEATURE:
                                                                                                                                                                                                                                                                                    FEATURE:
                                                                                                                                                                                                                                                                                                                                                               FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                           FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IDENTIFICATION METHOD: FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FEATURE:
